PROJECTS

Ticket System (Node.js API Creation)

- Developed an email-to-ticket system with prioritization, task workflows, and a Kanban board for efficient ticket management.
- Built tools for task assignment, tracking, and team collaboration, including email reply features.
- Implemented user roles and permissions to manage access for agents and administrators.

CMMC (CI4 CMS + Frontend)

- Developed a frontend system with login, signup, and inquiry forms.
- Integrated Google Authenticator and AI features.
- Built dashboards for certification levels and controls.
- Enabled file management for tools, SOPs, and implementation tracking.

HR Portal (CI4 CRM + Frontend)

- Developed an HR portal with features for employee management, attendance tracking, leave applications, payroll processing, and performance evaluations.
- Integrated role-based access, automated notifications, and detailed reporting for streamlined HR operations.

Royal Maratha (Laravel API Creation)

- Developed Laravel APIs to handle authentication, user management, biodata creation (PDF/Excel), and matchmaking search.
- Built admin controls and integrated payment gateways (Razorpay)
